

Amarra MINI :: Ultrafidelity Playback from Your Mac

Sonic Studio presents the Amarra MINI Computer Music Player. MINI is the ultrafidelity computer music player for audiophiles looking to explore the sound of Amarra at an affordable price. MINI, and it's full-featured big brother Amarra, represents the next generation of computer based music players and are designed using the same technology in use today by record companies worldwide for producing CDs, DVD's and Blu-ray titles.

Amarra MINI :: Works with iTunes

Coupled with the convenience of iTunes, the world's most popular music delivery system, Amarra provides a seamless integration of multiple sample rates and music formats. Organize your music as you like it and Amarra automatically handles PCM and lossless files up to 96 kHz, while using iTunes for all compressed formats.

Amarra MINI :: Simply Sounds Better

It's easy to make audio sound good on a computer but it takes specialized knowledge to make fabulous sounding music. At every step in the processing chain, particular attention has been paid to achieve the best quality possible. With Amarra's built in SSE engine, adopted from our professional audio workstations, the bit perfect output from your computer will sound more like analog, with a refined soundstage. Amarra MINI is a critical yet affordable audio component in your complete high fidelity system.

- Advanced architecture assures accurate musical reproduction
- Automatic hardware sample rate switching — no need to relaunch iTunesv
- Playlist Mode sidelines iTunes for gapless playback
- Natively plays Compact Discs — no ripping

Amarra MINI :: Purchase

Amarra MINI may be purchased through our online store or from your local dealer. Please visit our Dealer page to locate a representative near you. To experience ultrafidelity playback for yourself, visit our website and download your Amarra MINI demo today.
