*Desktop Mastering from Sonic Studio*

## PreMaster CD :: Master your Audio

PreMaster CD is the high resolution audio toolset designed to streamline the premastering workflow of importing, editing, PQ preparation, and delivery of final master. PreMaster CD brings together the same set of capabilities used by professional recording studios and record labels worldwide. You too can create pristine audio tracks ready for replication as a 2.0 compliant DDP File Set or as individual audio tracks for use in other applications.

## PreMaster CD :: Import

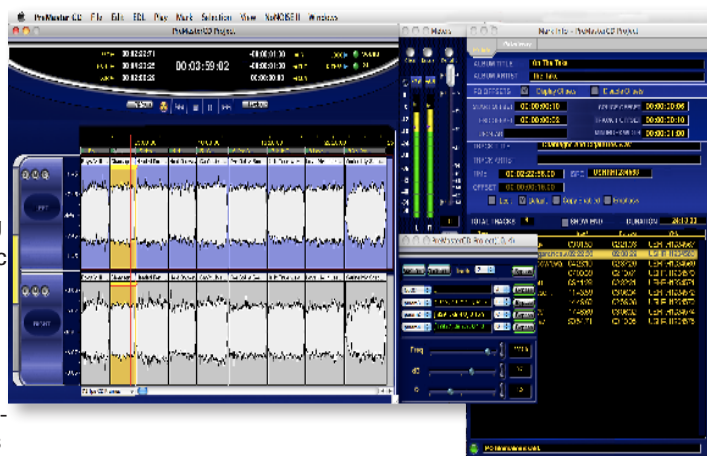

Import audio sources up to 192 kHz, in AIFF or Broadcast Wave (with metadata). Open MP3, AAC or FLAC files as source material.

## PreMaster CD :: Edit and Prep

Trim your material using high performance editing tools to adjust real-time fades and gain. Add Sonic EQ to finalize the sound and then mark your audio for replication.

## PreMaster CD :: Deliver

Create 2.0 compliant DDP file sets with CD Text support and burn CDs with confidence. For best results PreMaster CD always generates a 2.0 DDP for reliable replication. Using the Export feature you can then export individual tracks or a complete album as AIFF or WAV (with metadata). With the optional NoNOISE II you can perform miracles of audio restoration and recovery. The optional DDP File Open allows repurposing of existing DDP file sets.

## PreMaster CD :: The Mastering Standard
