Manual DeClick 2.0 — First of a New Generation of NoNOISE

Sonic Studio Releases Updated Software as Restoration Option

May 16, 2005 — Newbury Park, CA – Sonic Studio, LLC, the premier developer of professional digital audio solutions, announced today that their industry standard restoration tool, Manual DeClick, has come to Mac OS X. Manual DeClick 2.0 highlights Sonic Studio's commitment to actively maintaining compatibility with the most current Macintosh platform and demonstrates their dedication to ongoing development of exceptional tools for accomplished engineers.

Manual DeClick 2.0 provides the highest level of quality and selectivity required by corporate restoration departments and discriminating independents worldwide. Jayson Tomlin, Vice President of Sales, states that Manual DeClick "...wasn't just the first, it's still the finest tool available for surgical restoration of impaired material. The fidelity of the tool, when compared with other entries in this space, continues to define 'best in class.'" "Unlike many of the commodity products out there," he continues, "Manual DeClick operates on the data in the frequency domain while providing a familiar, time-based user interface for fast, flawless repair."

Leveraging the unique power of Mac OS X, SSE and Sonic Clarity technologies, Manual DeClick forms the foundation of Sonic Studio's definitive NoNOISE restoration suite, which also includes DeCrackle, a distortion reduction tool, and Broadband DeNoise, which delivers high fidelity noise suppression. As part of the plan to update their entire catalog, Sonic Studio will release this product as the first in a series of revamped components for their benchmark digital audio restoration suite.

"Our customers, the major record labels and Hollywood studios, rely on our restoration tools every day, preferring them to the wide range of imitations out in the marketplace," said Jon Reichbach, President of Sonic Studio. "When you purchase an album reissue or classic movie on DVD, you're most likely listening to Manual DeClick at work."

Manual DeClick is available as an option for version 2.0 of SonicStudio•DDP and will also be available for upcoming software packages. The Manual DeClick 2.0 option is priced at US\$495 and is currently available through Sonic Studio and their global reseller network. For more information, contact Sonic Studio sales at 805-987-5808 or visit www.sonicstudio.com on the Web.

About Sonic Studio

Sonic Studio is the premier manufacturer of ultra-fidelity DSD and PCM content creation systems. Sonic Studio's Emmy award winning NoNOISE suite is the leading audio restoration toolset for archivists, record labels, videographers and forensic investigators while their product line for Red and Scarlet Book premastering defines the state of the art. Sonic Studio's digital audio workstations and software are in use at all major studios, record labels and post

production facilities worldwide. Based in Newbury Park, California, with R&D offices in Marin County, Sonic Studio has support and sales offices in Minnesota and Texas.
