Sonic Studio Rolls Out Key Update

Company Starts Distribution of Latest Version

Marin County, CA — December 15, 2006 – Sonic Studio, LLC, the leader in ultra-fidelity production tools for audio engineers, announced the 1.1 release of their newest professional application, soundBlade. First shown at the 121st convention of the Audio Engineering Society in San Francisco, the product has entered distribution channels worldwide.

soundBlade continues to answer a busy engineer's need for a streamlined, high fidelity alternative to other PCM production applications. soundBlade combines ease of use and exceptional value with features that speed day to day tasks. Running natively on the secure and user friendly Mac OS X, soundBlade relies on Core Audio for default I/O so hardware lock-in is eliminated. The application combines Sonic Studio's famed EFM™ and 4 point editing capabilities with their SSE™ real time audio engine and optional, accelerated Series 300 DSP I/O processors for the finest fidelity money can buy.

For in-depth signal manipulation, soundBlade offers support for NoNOISE II and reNOVator options plus AU and VST plug-in support. Also in the 1.1 release of soundBlade is Vive from iZotope, Inc., which bolsters the production power of soundBlade by bundling basic restoration functions crucial to a complete workflow.

The 1.1 release incorporates more than three dozen feature additions and stability enhancements, including the highly anticipated dual EDL mode for improved source/destination editing and support for split DDP file sets. Combining Sonic Studio's benchmark premastering functionality with the signal processing, restoration and comprehensive editing that discriminating mastering engineers have been asking for, soundBlade carries an economical MSRP of \$1495. It is available now from Sonic Studio resellers. For more information and demonstration downloads, visit www.sonicstudio.com.

About Sonic Studio, LLC

Sonic Studio is the premier manufacturer of ultra-fidelity PCM content creation systems and DSD post production products. Sonic Studio's Emmy award winning NoNOISE II suite is the leading audio restoration tool set for archivists, record labels and videographers and forensic investigators while their product lines for Red and Scarlet Book premastering and authoring define the state of the art. Sonic Studio's digital audio workstations are installed at all major studios, record labels and post production facilities worldwide. Based in Marin County, California, Sonic Studio has sales offices in Texas and an international network of distributors and channel partners who share the company's commitment to quality and service.
